

INSURANCE POLICY DOCUMENT — POLICY ID: P010

Policy Classification: Enterprise Data Center Infrastructure & High-Density Compute Cluster Indemnity **Issued By:** SecureShield Property & Casualty Insurance Corporation **Target Object:** Enterprise Data Centers, High-Density Server Racks, Cryogenic Cooling Infrastructure, and Uninterruptible Power Systems **Regulatory Status:** Active Legal Framework for Claims Underwriting

SECTION 1: SCOPE OF COVERAGE & INSURED PERILS

This foundational contract of indemnity governs the insured operational assets against direct physical loss, catastrophic degradation, or sudden structural impairment arising out of verified environmental, electrical, and facility perils. The underwriter agrees to indemnify the policyholder for the reasonable cost of repair, replacement, or structural remediation of the target object, provided that the proximate cause of the loss is an explicitly insured peril and is not otherwise excluded under the concurrent causation doctrines established within this framework.

- Cryogenic Cooling Line Rupture and Liquid Inundation:** Sudden physical fracturing or volumetric failure of pressurized liquid cooling pipes or coolant distribution units, resulting in immediate flash-flooding, localized condensation, or thermal shock to surrounding high-density server blades.
- Sub-Transmission Grid Transient Overvoltage:** Accidental, catastrophic electrical surge propagation entering the facility from the primary sub-transmission utility grid, which directly bypasses primary surge suppression systems and induces structural circuit fusing or dielectric breakdown in power distribution units.
- Clean-Agent Fire Suppression Accidental Discharge:** Sudden, un-forecasted kinetic pressure waves or acoustic vibration damage caused by the accidental activation and rapid volumetric discharge of gaseous clean-agent fire suppression systems, resulting in hard drive head crashes or storage array structural misalignment.
- Subterranean Structural Foundation Buckling:** Direct physical compromise or micro-shifting of the facility's specialized anti-seismic raised flooring or foundational concrete slabs, induced by un-forecasted subterranean shifts, hydro-static pressure changes, or adjacent structural excavation.

SECTION 2: COMPREHENSIVE COVERAGE LIMITS & LIABILITY CAP

The liability of the insurance corporation is strictly capped up to the Maximum Deductible Limit / Sum Insured per individual incident. Claims exceeding these specified thresholds will be subject to partial approval or out-of-pocket expenses by the policyholder.

- **Facility Aggregate Limit:** The maximum payable financial liability limit per single data center facility asset destruction or catastrophic infrastructure event is capped strictly at **Rs. 90,00,00,000 (Ninety Crore Rupees)**. This includes structural clean-room decontamination, technical salvage, and initial environment re-stabilization.
- **Compute Cluster Hardware Sub-Limit:** In the event of standalone server rack failure, processing node destruction, or catastrophic electronic degradation from localized electrical transients, the maximum indemnity payout is legally capped at **Rs. 35,00,00,000 (Thirty-Five Crore Rupees)** per incident for hardware replacement and cluster recalibration.
- **Environmental Control and Cooling Array Sub-Limit:** For structural or mechanical damage caused to industrial chillers, cooling towers, cooling distribution units, or localized liquid loops due to an insured peril, the total coverage limit per incident is capped at **Rs. 15,00,00,000 (Fifteen Crore Rupees)**.
- **Uninterruptible Power Supply (UPS) and Generator Cap:** Damage caused by sudden catastrophic battery room thermal runaways or utility-room electrical explosions is bound to baseline evaluation limits up to a maximum payout threshold of **Rs. 20,00,00,000 (Twenty Crore Rupees)** per single localized event.

SECTION 3: POLICY EXCLUSIONS & NON-PAYABLE CLAIMS

The corporation is not legally liable to make any transaction or award compensation under this comprehensive policy if the damage or loss arises from the following strict policy exclusions:

- **Particulate Contamination and Air Filtration Neglect:** Any progressive electronic degradation, micro-arcing, or cooling line blockage resulting from a failure to maintain clean-room air filtration standards or explicit violations of statutory ASHRAE environmental class parameters.
 - **Cryptographic Asset Loss and Logical Data Corruption:** Total or partial loss of intangible digital assets, cryptographic keys, databases, or operating system structural integrity caused by logical file system corruption, software bugs, or general database structural degradation without accompanying physical hardware damage.
 - **Thermal Overheating from Load Over-Allocation:** Absolute exclusion of coverage applies if the high-density compute cluster suffers localized thermal meltdown or structural board warping while operating under deliberate processing overloads that exceed the maximum thermal design power (TDP) engineering specifications of the rack infrastructure.
 - **Uncertified Facility Modifications:** No coverage is provided if the electrical topology, cooling delivery frameworks, or structural power routing arrays were altered, modified, or repaired by an individual or contractor who does not hold active, legally valid engineering credentials from international uptime validation institutes.
-

SECTION 4: MANDATORY CLAIM REQUIREMENTS & DOCUMENTATION

To successfully initiate, validate, and verify an active insurance claim evaluation process, the claimant must submit the following verified evidentiary proof within the stipulated filing window:

1. **Environmental Monitoring and DCIM Log Cryptographic Export:** Presentation of an authentic, unedited cryptographic export of the Data Center Infrastructure Management (DCIM) log files illustrating temperature vectors, relative humidity metrics, power draw fluctuations, and cooling line pressures at the precise minute of the incident.
 2. **Certified Forensic Electrical Engineering Valuation Report:** An official, certified regulatory incident report copy issued by a licensed independent electrical engineer confirming the proximate cause of the power distribution unit failure or dielectric breakdown.
 3. **ASHRAE Compliance Certification Logs:** Active facility maintenance ledger records and logbooks confirming the data center hall had consistently passed environmental particulate and humidity checks within the thirty days prior to the incident.
 4. **Authorized Hardware OEM Replacement Invoices:** Itemized financial invoices and repair estimates compiled by a certified original equipment manufacturer workshop or licensed technology asset surveyor.
-

SECTION 5: GENERAL CLAIMS PROCESSING & EVALUATION RULE

All submitted claim applications undergo automated risk scoring, context-aware semantic screening, and policy coverage validation parameters. All coverage validation parameters are strictly subject to the stated incident limits, explicit policy exclusions, and strict claim requirements documented above.

Regulatory Disclaimer: Any automated or AI-generated recommendation (such as APPROVE, REJECT, or REFER) should not be treated as a definitive or final claim decision. A certified human claims handler and authorized insurance underwriter must thoroughly review the generated recommendation, examine the associated evidence logs, and execute the final authorization.
